Our Coinage and **ARMCO INGOT IRON**

A ten-dollar Gold Piece contains exactly 90 per cent. pure gold. A little less gold and the money is false—worthless.

ARMCO Ingot Iron contains less than sixteen hundredths of one per cent. carbon, copper, silicon, sulphur, phosphorus, manganese, oxygen, hydrogen and nitrogen. Greater impurity and the metal is not "commercially pure iron"—it could never find its way into an ARMCO Ingot Iron Product.

Thus, the standard of ARMCO purity is practically as rigid as the standard of our coinage. A product bearing the ARMCO trademark is of known analysis—*dependable*—identical with other ARMCO products which have established ARMCO durability.

All Loads

TIMKEN *Tapered* ROLLER BEARINGS

Another phase of Dual-Duty capacity in Timken Tapered Roller Bearings is their ability to carry *all* loads—radial, thrust, resultant—at *all* speeds.

Evidence of this is found in the ever-increasing use of Timkens, for example, in the pinion mountings of motor cars, a location in which full motor speed must be sustained by the bearings under unusually severe conditions of radial, thrust, resultant, and shock loads.

Likewise in the machine tool field Timken speed capacity is favored for grinders, band saws and other high speed machinery.

In fact, in every phase of industry engineers are specifying Timken Tapered Roller Bearings in ever-increasing numbers—

(1st) not only because no condi-

tions of load or speed are more than a match for Timkens;

(2nd) but also because Timkens carry maximum load per unit of space required, simplifying and economizing design;

(3rd) and finally because Timkens permit initial excellence of operation to be maintained for the life of a Timken-equipped mechanism, through Timken *adjustability* for the wear that must follow motion.

These Timken characteristics will likely be of major interest to you in years to come, when designing or operating problems arise in your experience, which can be completely solved only by the use of Timkens. As is the case with engineers of today, the sheer ability of Timken bearings will make you glad to contribute to ever-increasing Timken dominance.
